
Easy Band LA Lap Band Weight Loss

For a qualified Easy Lap Band surgeon in Los Angeles look no further. Our surgeons are double board certified and experienced in performing Easy Band weight loss surgery. The Easy Band is a laparoscopic banding procedure that is minimally invasive. There are so many benefits to minimally invasive surgery. Because the incisions are so small and the tools used are miniscule, it reduces complications like excessive bleeding. The small Easy Lap Band incisions are less noticeable, which is great for when you want to show off your new physique. A minimally invasive Easy Lap Band procedure has a quicker recovery time than if the surgery were performed using traditional incision techniques. After about 7 days you can return to work or school.

The first month after the Lap Band surgery you will have a limited diet so your stomach can heal and adjust. You'll begin with liquids, then soft pureed food and then onto regular solid food. You'll lose a lot of weight during the first month due to the restricted diet. When your doctor determines you can handle solid food, you can eat whatever you want- as long as it's in moderation. Your Easy Lap Band surgeon will also recommend that you don't drink too much beverage of any kind while eating, because this may force too much food into the smaller stomach pouch.

If you would like to learn more about LA Easy Band surgery and if it can help you, it's best to come into our medical offices in Beverly Hills for a free seminar.
